

ABSTRACT

Mery Ruslan. 2022. The Using of Flash Card in Improving Students' Vocabulary at the Seventh Grade Students of SMPN 1 Palopo. (Supervised by Rusdiana Junaid and Paldy)

The research question that should be answered in this research is: Can the use of flash card learning media improve students' vocabulary at the seventh grade students of SMPN 1 Palopo. The subject of this research consisted of 32 students of VII E at SMPN 1 Palopo. The data of this research collected through vocabulary test as the research instrument in the pre-test and in the post-test which was analysed quantitatively. The mean score of students in the pre-test was 57.20 which is lower than the mean score of students test in the post-test that 92.80. The result of the p-value by using SPSS program version 24 show that the (P) is 0.000 and the (α) 0.05, therefore $P < \alpha$ ($0.000 < 0.05$). It means that the null hypothesis (H_0) rejected and alternative hypothesis (H_1) is accepted. It can be concluded that the using of Flash Card improved students' vocabulary at the seventh grade of SMPN 1 Palopo.

Keywords: Vocabulary, flash card
